

## DENT-Schedulers

### IoT Digital Signage

The DENT-TAB-Scheduler family of products are POE-enabled tablets offering live calendar integration with highly visible screens. Schedule and manage meeting spaces using your Microsoft, Google, or Apple calendars from anywhere with the option for no recurring licensing fees.

### Features and Benefits

Display the current status of any room or conference room with bright, visible screens and LED rings using your current calendar system. These PoE-enabled tablets do not require AC outlets, reducing their installation to a simple network cat5/6 cable. The units come pre-configured with a free-to-use license allowing for calendar integration and display. A licensing fee upgrades it to a fully customized feature set with multi-room management from one screen. Get the most out of your shared spaces with this affordable, easy to implement scheduling solution.

## Connected Room Signage

Connect your space to resource calendars through Microsoft Exchange, Office 365, Google Calendar, Google Workplace (formerly G Suite) or an ICS URL link from any shared internet calendar. Configuration takes minutes and uses the calendaring systems you already use. No back-end account management required, no separate paid accounts.

**10" Models Come with a highly visible LED ring to see the room state from any direction**

## AVAILABLE

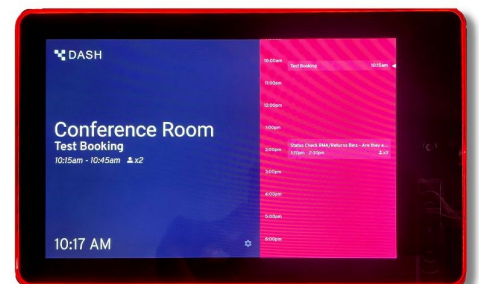

## MEETING STARTING

**Displays:**

- **Room Name**
- **Schedule**
- **Booking information**

## OCCUPIED

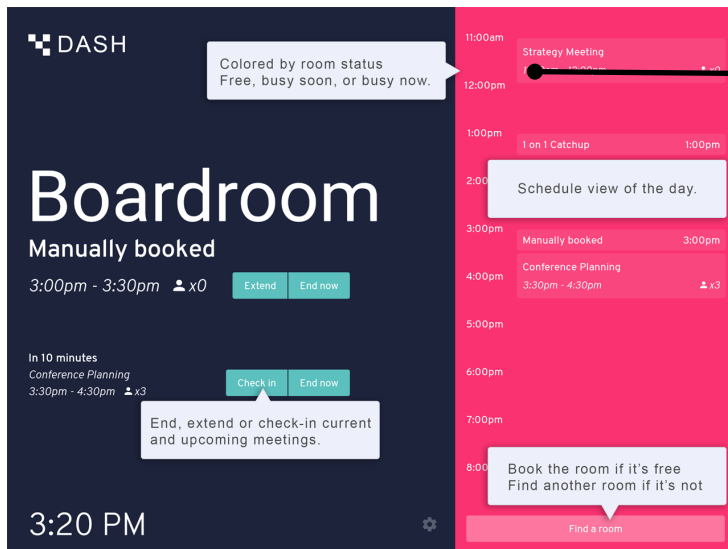

Each tablet comes with a free-to-use basic calendaring function with LED indicators pre-installed. Simply connect your calendar, and start displaying your room calendar.

### Ready to Customize?

With a per-device licensing fee you can customize the look of each display, integrate multiple room schedulers, and manage meetings right on the touchscreen display. Visit <https://www.poetexas.com/dash-subscriptions/>

## Features: (Fully Licensed)

### Meeting display

The main room display is built to emphasize the important information you need to know, as well as giving you access to commonly used features.

The information displayed on the screen can also be customized:

- Show/hide meeting titles
- Number of days to show
- Room Booking Controls

### Booking and Check-in

#### Book directly from the screen

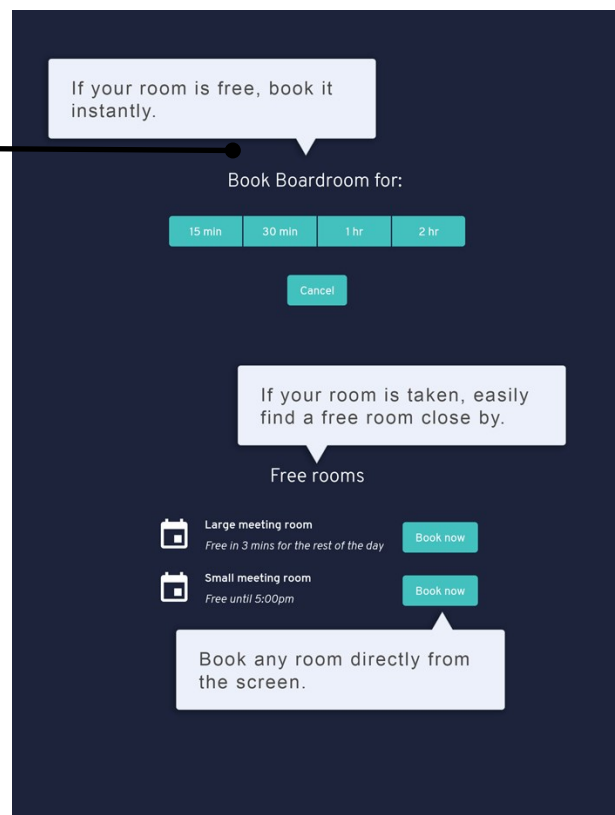

The room booking feature allows you to book the room directly from the screen. Just tap the amount of time you would like your booking to last (from 15 minutes to 2 hours).

#### Automatically cancel abandoned meetings

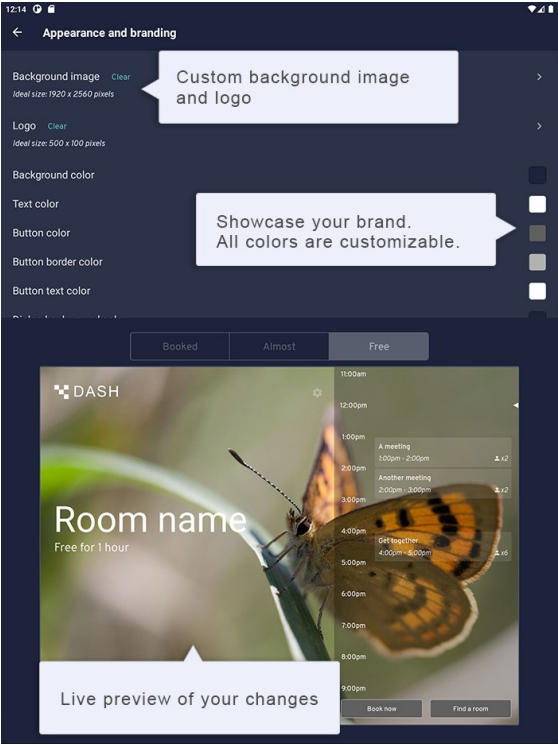

You can setup user check-ins to meetings. Meetings not checked-in to within ten minutes of them starting are ended, freeing up the room for other meetings.

#### Find free rooms

Dash shows you other meeting rooms in the building that are either free now or will be free in the next ten minutes. You can then book a room directly from the screen, and head to the room knowing that your space is reserved.

## Features: (Fully Licensed)

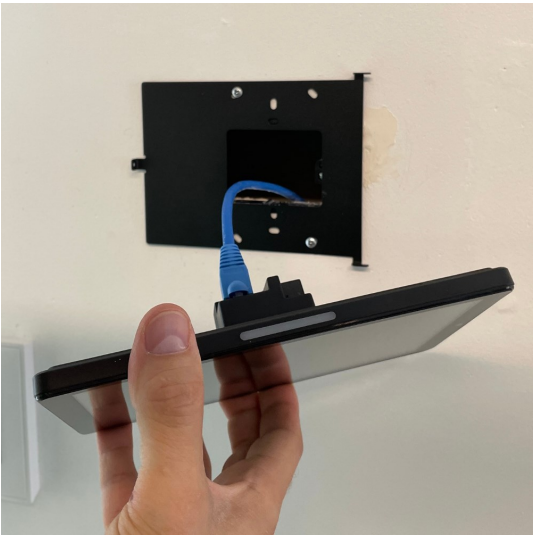

### Custom Branding

Dash's display is highly customizable, allowing you to make your meeting room screen consistent with your company brand.

You can set a custom app background image displaying your company logo, and you can also customize the colors displayed on screen to match your branding.

### Visible PoE Enabled Displays

Simplify your installation to a simple network cable for these highly visible, easily configured room schedulers.

## Specifications

---

### Hardware

- ◇ PoE IEEE802.3af
- ◇ WiFi + Bluetooth
- ◇ Power adapter
- ◇ Android Operating System
- ◇ 5 point pouch capacitive touch screen
- ◇ RGB LED bar on all 4 sides
- ◇ Wall-mount
  - ◇ 10" Model Includes Mullion Mount
